### DETAILED ACTION

1. Claims 50-78 are pending. Claims 1-49 have been cancelled.
2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on August 21, 2007 has been entered.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 50-57, 63, 64, 68, and 76-78 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vertex Pharmaceuticals Incorporated (WO 01/42216, of record).

The instantly claimed compounds are disclosed by Vertex Pharmaceuticals Incorporated. At page 15, Table 2, see the compound 1B-1. At page, 16, Table 3, see compound 1C-2. The difference between the prior art compound and the instantly claimed compound is the X substituent (-OH versus -Oalkyl).

Vertex Pharmaceuticals Incorporated teaches a class of isoquinoline compounds, which are useful as inhibitors of caspases. The -OH radical of the prior compound is

equivalent to the claimed X which represents  $-OR^1$  and  $R^1$  represents  $C_{1-6}$  straight chain alkyl.

It would have been obvious to one of ordinary skill in the art to replace the hydrogen substituent of the prior art for an alkyl substituent of the instantly claimed compound in these classes of isoquinoline compounds. The modification of one radical for another does not modify the pharmacological behavior of the compounds. As such, the expectation of similar pharmaceutical properties is retained.

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory

Art Unit: 1625

double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 50-76 and 78 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims of copending Application No. 10/609,147. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claimed subject matter is an obvious variant. See the radical, X. X represents -OH versus -Oalkyl.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

7. The Information Disclosure Statement filed August 21, 2007 has been considered. The prior art references alone or in combination form do not teach nor suggest structurally similar compounds as the instantly claimed invention. There is no motivation to modify the prior art compounds to derive the instant compounds.
